

Manufacture of
U.S. SPECIALTY COATINGS

FEATURED PROJECT

DEX-COAT

Smooth or Textured Elastomeric Deck Coating

DEX-COAT is a water-based, acrylic deck coating that forms a tough finish for all exterior/interior floor surfaces. It has outstanding durability and its abrasive-resistance quality assures excellent wear in even heavy traffic areas. It displays high resistance to alkali, acids, UV exposure and moisture. When cured, **DEX-COAT** remains elastic and will expand and contract with temperature and weather variances. Touch ups are extremely easy and can be completed within minutes.

Project Name: Seven Hills School
Walnut Creek, CA

Supplier:
Kelly-Moore Paints Pleaston, CA

Applicator: Jim Minor
American Home Painting

Completion Date: August 2014

Coating System:

Primer/Top Coat:
Ultra-Prime
Dex-Coat

FEATURES:

- Available in Smooth or Non-Skid
- Outstanding Color & Gloss Retention
- Durable
- Low Gloss
- Flexible Elastomer
- Choice of Colors
- Low VOC / Universally Compliant
- Very Low Odor
- Easy Maintenance
